

Quick to Set Up!
Easy to Use!
Very Affordable!

How IT Works...

The system automatically prepares its data for backup, compresses the files, encrypts them for security and transmits the set to a secure vault off-site within our data center. An email is then sent confirming the events.

Network Backups

e-Backups.net is highly scalable. It can handle daily network backups as well. 20 GB's of data can easily be protected off-site in a matter of hours. Put the Internet to work while you're asleep. Add the OPEN FILE Manager for even more functionality when backing up open files, such as MS Exchange, SQL Server, etc.

Desktop Backups

Is YOUR desktop backed up? Statistics show that up to 80% of a company's data may reside on local drives on user desktops and laptops and close to 70% are never protected. e-Backups.net can allow each user to act independently or create one schedule to standardize across the whole organization.

Mobile Users

Flexible enough for those on the go! Mobile users can easily backup their data in minutes while checking their email or searching the web. You can also resume an interrupted backup at a later time. If a scheduled backup is missed, the next time your laptop is started, you're prompted for options.

What about security?

Backup sets are encrypted for complete security. With e-Backups.net your data is protected by multiple layers of physical, logical and network security. Tape backups are not generally encrypted, so anyone can read them and gain access to your client database, billing records, payroll, tax info, and anything else on your computer. e-Backups.net encrypts the backups for complete security so nobody, not even we, can read them.

Our software is based on technology used by Compaq on-line services and adopted by Siemens.

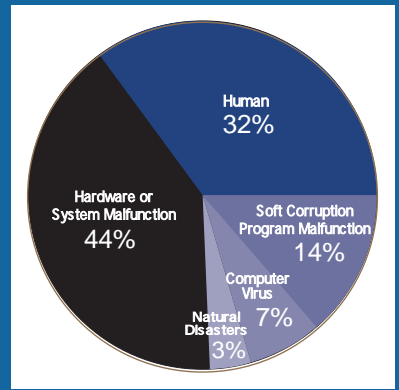

Restoring Data

Independently retrieve data anytime day or night. Keep multiple versions of your files. Maybe you just need a single

file from last Thursday or an entire volume of data from last month. You have instant access to any

“20 MB of accounting data takes 21 days and costs \$19,000 to reproduce.”

“It Just Simply Makes Sense.”

KEY BENEFITS

- Data Is Off-site Instantly
- Completely Automated
- Instant Email Notification
- No More Expensive Tapes
- Restore From Anywhere
- Independently Retrieve Data
- At Any Time, Day Or Night

SERVICE ENHANCEMENTS

- Monthly CD/DVD Archiving
- Emergency NAS Restore 24 hr
- Dedicated Servers Available

SERVICE REQUIREMENTS

- Windows 95/98/ME
- Windows 2000/XP
- Windows NT 4.0
- Windows 2000 (Server or Workstation)
- Any Internet Connection (TCP/IP)

TECHNICAL

- Data Encryption - up to 448 bit
- DES - 56 bits
- TDES (Triple DES) - 168 bits
- Blowfish Algorithms - 448 bit
- Full Support For Backups & Restores
- Email Notification
- Compression Average 3:1
